Sulphur

Multi-Chord

An acid-forming mineral that is part of the chemical structure of the amino acids methionine, cysteine, taurine and glutathione, sulfur disinfects the blood, helps the body to resist bacteria, and protects the protoplasm of the cells. It aids in necessary oxidation reactions in the body, stimulates bile secretion, and protects the protoplasm of cells. It aids in necessary oxidation reaction in the body, stimulates bile secretion, and protects against toxic substances. Slows down the aging process.

Retest

1 of 2

Re-establishing balance to the energetic pathways (that run through specific organs, glands, and tissues) may hold the key to restoring and maintaining optimum health. This approach is not looking for any particular disease state, and therefore no claim of diagnosis can be made.

An essential amino acid that is significant in the growth and repair of tissues. It is important for the maintenance of the myelin sheaths that protect nerve cells, and is needed for the production of both red and white blood cells. It also protects the body from radiation damage, aids in removing heavy metals from the system and may help in the prevention of AIDS. If levels are too high, may lead to stress and even psychological disorders such as anxiety and schizophrenia; low levels may contribute to rheumatoid arthritis and may be associated with nerve deafness. Methionine has the ability to lower histidine levels. Histidine may be helpful for people with indigestion resulting from a lack of stomach acid.
